### DESCRIPTION

The UDC-IC is designed to provide signal level conversion between RS-232 and V.35 equipment. The unit supports data rates up to 128Kbps.

The UDC-IC has two TTL level interfaces for connecting each data interface. The unit is shipped with any two user specified interfaces included in the price. Additional data interfaces are sold separately.

The individual data interfaces are available in DCE or DTE formats. Each data interface has the ability to force commonly used control signals such as RTS, CTS, DSR, DTR, Ring Indicate, Control and Indicate.

The data interfaces may be mix and matched in any combination. Installation is fast and simple by plugging the DTE interface card into Port B and the DCE interface card into Port A. In all installations, Port B will always provide timing to Port A.

The UDC-IC has status LED's for each attached data interface which allows the user to visually confirm the presence of control signals.

The UDC-IC utilizes state of the art digital CMOS technology to provide a feature filled product at a very affordable price.

The UDC-IC is housed in a sturdy metal enclosure and operates on 110/220VAC.

The UDC-IC has a three year warranty and a 24 hour turnaround on warranty repairs.
